DETAILED ACTION

1. The rejections using Matsuura et al. in sections 2, 4, and 5 of the office action mailed 25 August 2004 are withdrawn in view of applicant's arguments that the PMMA particles of Matsuura et al. do not have a functional surface vinyl group capable of reaction with an external polymer substrate.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kalantar et al. (U.S. 2003/0162890 A1).

The reference teaches particles with residual surface reactive vinyl groups or other functional groups such as hydroxyl groups (section 0057). Particles of the reference may be used in resin matrix materials of polymers other than those used to form the particles (section 0058). The instant

Art Unit: 1772

invention claims particles with surface vinyl functional groups in combination with a resin of a different polymer. It would have been obvious to one of ordinary skill in the art to have used the functional particles of Kalantar et al. in the resin matrix applications of the reference such as porogen formation because of the teachings of the reference regarding possible uses of the particles. Such a matrix composition is taken as being capable of forming a textured layer if coated in the proper thickness.

4. Claims 1-35 are allowed. The cited prior art does not teach or suggest particles with functional vinyl surface groups, that are capable of bonding to an elastomeric substrate with a textured topography or donning layer, in combination with such a substrate or donning layer and substrate. These features in combination with the other limitations of independent claims 22 and 33 define over the cited art.

5. Applicant's arguments with respect to claim 36 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 1772

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 571-272-1503.
